

Mixed-Use Area for Office, Training, & Conference Space

Case Study

Application: Lower-level office for shipping manager, Upper-level conference/training room

Products:

- ✓ OmniFlex System
- ✓ Vinyl Fire and Sound Wall Panels

Benefits Provided:

- ✓ Maximized space utilization with 2-story structure
- ✓ Integrated large door openings to accommodate large equipment

The Situation

Welch is a leading distributor of forklifts and provides warehouse solutions throughout the Western United States. As part of their service, they provide ongoing training and education for both their staff and clients. They required additional training room space, as well as a professional meeting room for the sales department to engage with clients in meetings, programs and events.

The Challenge

Welch needed to maximize space within an already-strained warehouse space. This required PortaFab and Welch collaborating to capture precise field measurements.

The Solution

As a distributor and valued partner with PortaFab, Welch identified a PortaFab solution that captured their specific needs and showcased PortaFab's modular capabilities.

The resulting 2-story structure provided the valuable training and meeting space Welch required based on their continued growth as an organization. Specific to forklift training and seminars, a 6' x 9' double door was incorporated into the design to accommodate product brought into the training room for demonstration. Built on the second floor, the sales meeting area sat under a roof structured to support mounted overhead projectors.
